

Project Management Tools Report

Comparison of Trello, Asana, Monday.com, Jira

Prepared by: Kyrylo Pryiomyshev, Daniil Ustiuhov, Margarita Orel, Liina Leemet

Course: Software Project Management

October, 2025

Introduction

Project management tools help teams organize their work, distribute tasks, and track progress. In this report, we compare four widely used platforms: **Trello**, **Asana**, **Monday.com**, and **Jira**. Each of them serves different purposes, from simple task tracking to complex enterprise management.

The evaluation is based on seven criteria: team size, primary purpose, key features, collaboration options, target audience, learning curve, and free version limits. These factors allow us to consider both technical functions and the practical needs of student teamwork.

Advantages

Criteria	Trello	Asana	Monday.com	Jira
Team size	Great for individuals and small teams	Scales well from small to large teams	Flexible workflows for different team sizes	Strong for medium and large organizations
Primary purpose	Simple, lightweight project boards	Task coordination and teamwork	Automations and streamlined workflows	Full-scale project and issue management
Key features	Drag-and-drop Kanban boards	Timeline, task dependencies, Asana AI	Custom workflows, dashboards, automations	Scrum/Kanban boards, advanced issue tracking
Collaboration	Real-time updates, comments, mentions	Team communication, project messages, proofing	Real-time collaboration, linking documents	Strong team roles and permissions
Target audience	Individuals, freelancers, small groups	Business and non-technical teams	Broad business teams, customizable for many fields	Software developers, IT and service management
Learning curve	Very easy to start	Beginner friendly	Moderate learning curve	Very powerful once mastered
Free version limits	10 boards free	Up to 10 teammates free	Up to 2 users, 3 boards free	Free up to 10 users

Disadvantages

Criteria	Trello	Asana	Monday.com	Jira
Team size	Not scalable for large projects	Can be overwhelming in big projects	Free plan too limited for big teams	Too complex for small/simple teams
Primary purpose	Limited reporting and analytics	Limited customisation	Advanced features only in paid tiers	Overly complex for simple task tracking
Key features	Few advanced PM features	Free plan restricts functionality	Steeper setup for advanced workflows	Interface can feel cluttered
Collaboration	No-built in chat	Storage limits on free plan	Requires training for efficient use	Collaboration mainly suited to developers
Target audience	Not for enterprises	Less suitable for highly technical teams	Can be confusing for non-technical users	Not user-friendly for non-IT teams
Learning curve	Too simple for advanced users	Moderate learning curve	Steeper for beginners	Steep learning curve
Free version limits	Paid plan needed for advanced users	Limited storage and users	Very restricted free plan	Free only up to 10 users

Usage Report

Conclusion about Trello

Our team chose Trello. We chose it primarily because it is easy to learn. Another important factor in choosing a PM tool was that the task is not complex and does not require more sophisticated tools such as Jira.

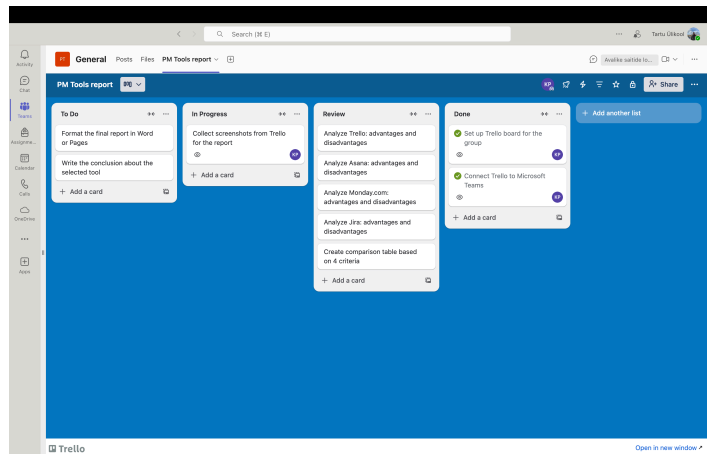

A plus was the ability to interact with Trello within Teams, which made it much easier to work with. It also compensated for the lack of a built-in chat in Trello itself. Another plus was the user-friendly interface and the ability to use visual tags. This improves visual perception and makes it easier to work with Trello.

A disadvantage for our team was that only the administrator can edit the board. Perhaps the paid version has more flexible access settings for editing the board, but our team used the free version.

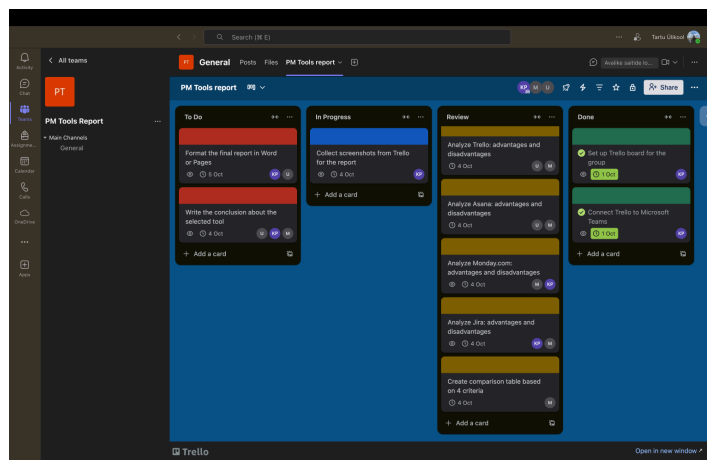

In conclusion, we can say that Trello is the ideal PM tool for small teams and simple tasks.
