

Video task

1. What skills are more important?

Enabling decision making is crucial to keep projects on task and achieve their goals.

Communicating and escalating - as a project manager, you'll use your communication skills in everything you do (meetings, e-mails etc) to escalate risks or issues to stakeholders.

Flexibility - plans will change even with careful upfront planning, being flexible is a key. By staying cool under pressure, you'll be able to adjust while helping your team to stay calm, too.

Strong organisational skills - having the ability to organise these processes and the core elements of a project to ensure nothing gets lost or overlooked.

2. Is there any difference between Project Management Skills and Project Leadership Skills?

Management skills will help to organise work processes. Leadership skills will help when you need to guide a team. Influencing without authority - the ability to guide teammates to complete their assigned work without acting as their direct manager.

Leadership skills:

Communication - checking in with teammates to understand how they're progressing on a task and providing clear feedback on the quality of a teammate's work.

Negotiation - is needed to balance teammates' needs and what is best for the project.

Conflict mediation - is needed to ensure the project does not suffer as a result.

Understanding motivations - use individualised information to motivate and encourage each person on your team.

Emotional intelligence - feel the atmosphere in your team

Be a listener - people will feel themselves valuable.

Delegate and trust

3. Are these skills inherited as a talent, or can they be developed?

These skills can be developed.
