

Sprint 1 Burndown Chart

Software Engineering - SVNC.00.308

Project: StayEase Hotel Reservation System
Team: Cat Bacillus (Kyrylo Pryiomyshev, Danylo Chernov, Daniil Ustuhov)
Date: March 2, 2026
Version: 1.0

Project Name: StayEase Hotel Reservation System
Team: Cat Bacillus (Kyrylo Pryiomyshev, Danylo Chernov, Daniil Ustiuhov)
Sprint Number: 1
Sprint Duration: 90 minutes (Lecture 5 + Lecture 6)
Date: March 2, 2026

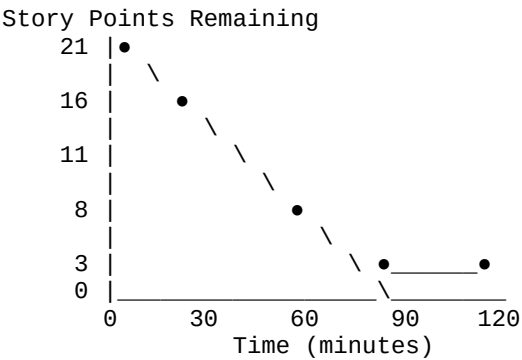

Sprint 1 Overview

Stories Committed: US-01, US-02, US-03, US-04, US-05 (21 story points)
Stories Completed: US-01, US-02, US-03, US-04 (18 story points)
Sprint Goal: Enable guests to search rooms, register, and make a reservation

Progress Data

Time	Completed Work	Remaining Points	Notes
Start (0 min)	Nothing yet	21 points	Sprint begins after planning session
30 min	US-01 (Search Rooms) implemented and tested	16 points	Strong start — parallel work paid off
60 min	US-02 (Room Details) and US-03 (Login) completed	8 points	Ahead of ideal pace
90 min	US-04 (Make Reservation) completed, US-05 started	3 points	US-05 concurrency harder than expected
120 min (End)	US-05 partially done (basic overlap check only)	3 points	Could not finish transaction locking in time

Burndown Chart

Legend: • = Actual \ = Ideal burndown

Interpretation

The team was ahead of the ideal pace through the first 60 minutes, completing three stories rapidly thanks to effective parallel task distribution. At the 90-minute mark, US-05 (Prevent Double Booking) revealed unexpected concurrency complexity: the basic date overlap SQL query was straightforward, but preventing simultaneous bookings required transaction-level locking (SELECT FOR UPDATE) that we had not planned for. The flat line from 90 to 120 minutes shows the team working on US-05 but unable to complete the transaction locking within the remaining time. US-05 was carried into Sprint 2 with a re-estimated size of M(5) instead of S(3).

Daily Standup Notes

Standup 1 (Lecture 6, Start of Day 2)

Member	Completed	Working On	Blockers
Kyrylo	Search API (US-01), Login API (US-03)	Reservation API (US-04)	None
Danylo	Search UI (US-01), Room Detail (US-02), Registration form (US-03)	Booking confirmation UI (US-04)	None
Daniil	Tested US-01 and US-02 (all passed)	Preparing test cases for US-04	Waiting for US-04 API to start testing

Task Board (End of Sprint 1)

To Do	In Progress	Done
US-05: Concurrent booking guard	US-05: Date overlap query	US-01: Search API + UI + Tests
US-05: Test double booking		US-02: Room Detail + Navigation
		US-03: Registration + Login + Tests
		US-04: Booking API + Confirm UI + Tests

Sprint 1 Result: 4 of 5 stories completed (18/21 points). Actual velocity: 18 points. US-05 carried to Sprint 2.
